

>> SYSTEM_OVERVIEW

The ENOVEM Protocol represents the pinnacle of Zero-Trust security within the Parkway OS ecosystem. Designed for institutional-grade data protection, it eliminates the Single Point of Failure (SPoF) inherent in traditional administrative logins.

>> SECURITY_ARCHITECTURES

1. SEQUENTIAL_HANDSHAKE

- 2-Step verification process.
- Hierarchical clearance levels (Operative > Commander).
- Ideal for rapid-response operational teams.

2. SHAMIR_FRAGMENTED_VAULT (M-of-N)

- Mathematical key fragmentation.
- No master key exists in memory until M-shares are provided.
- Cryptographically impossible to breach with a single compromised share.

>> SAAS_VALUE_PROPOSITION

Parkway OS is built to scale. Our architecture allows enterprise clients to deploy custom security nodes globally. With ENOVEM integrated, investors and clients are assured of data sovereignty and unbreakable cryptographic handshakes.
